Montana Health Care Programs Notice Pharmacy

Effective June 1, 2012

Plan First Billing Instructions and Updated Payer Sheet

The new Family Planning waiver became effective June 1, 2012, and accepts women who do not qualify for Medicaid family planning medications and treatment for sexually transmitted diseases. There are 2 classes of medications covered: those for contraception and those for treating sexually transmitted diseases.

Eligibility and detailed program information for Plan First is identified in the June 11, 2012, provider notice: http://medicaidprovider.hhs.mt.gov/pdf/provider_notices/2012/montanaplanfirstpn06112012r.pdf

The Plan First claims processing is slightly different than Medicaid claims processing. The pharmacist will enter a Diagnosis Code Qualifier, NCPDP field (492-WE) valid value 01, and the family planning diagnosis International Classification of Diseases (ICD-9) code that can be received from the prescriber. The ICD-9 code is entered in NCPDP field (424-DO).

Please contact your software vendor to open these new fields. The revised payer sheet is posted on the Montana Medicaid website on the Pharmacy page.

Reimbursement follows Montana Medicaid pharmacy reimbursement.
